

# Gesswein Hybrid Diamond Compounds

**Soluble in both oil and water**

Gesswein Hybrid Diamond Compound is an enhanced compound which is both oil and water soluble. Choose your concentration! Available in medium, standard, or strong concentrations. Higher concentrations cut faster, thereby reducing polishing time. Additionally, a high concentration performs better on harder metals. Uniform synthetic diamond particles allow for consistent surface finishes thanks to strict diamond tolerances. Hybrid Diamond Compound superbly adheres to mold and die surfaces aiding the polisher in achieving a precision finish. Available in two size syringes, 5g and 18g. Use with our Lubricant/Thinner either oil or water soluble (see our website for information). Made in Great Britain.

Available in Medium, Standard, or Strong concentrations

## HYBRID Diamond Compounds Features:

- Available in Medium, Standard or Strong concentrations
- Soluble in both oil and water
- Fast stock removal with excellent surface finish
- Heat stability up to 122°F (50°C)
- Smooth and creamy texture
- Environmentally friendly and safe to use
